

A PROFILE OF ARKANSAS'S RECYCLING ECONOMY

When communities invest in local recycling collection programs, they're supporting AR manufacturers who use recycled plastic, glass, metal, and paper to make new consumer goods.

Recycling isn't just about **smart** use of natural resources – it's about delivering **valuable** commodities to some of our most important businesses.

LOCAL INVESTMENT, REGIONAL RETURN

The Southeast is unique in its access to healthy recycling markets that feed regional manufacturing needs.

This map highlights key manufacturers who look to recycled materials to make their products.

Increased recycling rates help Arkansas manufacturers source good, affordable manufacturing feedstock.

A 2010 SERDC study determined that Arkansas is home to 5 manufacturers who rely on recycled content feedstock.

These companies:

- Make more than **\$381 million** in yearly sales
- Employ more that **1,200 Arkansas citizens** directly in the manufacture of recycled content products

RECYCLING IN ARKANSAS a healthy industry poised to grow

Local commitment to recycling supports Southeastern companies who haul, recycle, and manufacture goods.

RECYCLING IS AN INVESTMENT THAT RETURNS AGAIN AND AGAIN ♻️

Plastic recycling currently makes up only 2% of the materials recycled by citizens of Arkansas. With the development of a new PET recycling facility in nearby Oklahoma in 2010, the state has an opportunity to divert additional plastic beverage containers, film, and food containers from the landfill.

Source: ADEQ

Due to WalMart's corporate leadership in sustainability, the company recycles roughly 18% of the state's cardboard (based on 2008 data). Wal-Mart has made a commitment to making packaging more sustainable, with the use of recycled materials.

Arkansas enjoys access to key manufacturers of steel, aluminum, and glass in state and has access to plastic and paper manufacturing in neighboring states (Oklahoma, Alabama, and Louisiana).

If Arkansas recycled just
20% more
municipal solid waste
each year,

the state could
potentially see*:

over
1,240
new jobs

over **\$60**
million
annual
personal income

roughly **\$2.6**
million
annual state
tax revenue

*Using the 1,000 ton metric from S.C.'s Economic Impact Study

Results from a 2010 SERDC study to map demand of recycled feedstock in the Southeast US
